The global Printed Circuit Board Materials market size is predicted to grow from US\$ million in 2025 to US\$ million in 2031; it is expected to grow at a CAGR of % from 2025 to 2031.

The impact of the latest U.S. tariff measures and the corresponding policy responses from countries worldwide on market competitiveness, regional economic performance, and supply chain configurations will be comprehensively evaluated in this report.

Printed circuit boards (PCBs) are built from alternating layers of conductive copper with layers of electrically insulating material. The substrate most commonly used in PCBs is a glass fiber reinforced (fiberglass) epoxy resin with a copper foil bonded on to one or both sides. PCBs can also be made from paper reinforced phenolic resin with a bonded copper foil². PCBs generally consist of four layers, which are heat laminated together into a single layer⁴. There are also flexible PCBs built on flexible high-temperature plastic.

According to our Semiconductor Research Center, the global total output value of PCB was about US\$ 81 billion in 2022. With strong drivers from new technology, such as AI, 5G and new energy vehicles, it is estimated that the PCB industry will continue to grow steadily in the next six years. Global PCB manufacturers are mainly located in China mainland, China Taiwan, Japan, South Korea, Europe and the United States. Among them, Chinese local PCB companies hold the biggest share.
