Printed electronics technology is an emerging technology that combines printing technology with electronic manufacturing. Different from traditional electronic manufacturing technology, printed electronics technology has the advantages of large area, flexibility, large-scale preparation, low cost, and green environmental protection. Printed electronics (PE) has received increasing attention in the field of electronic device manufacturing and has broad future market prospects due to its ability to avoid the high cost and inflexibility of traditional silicon-based electronic devices and use traditional printing technology to manufacture various devices on flexible substrates. The production process of using printed electronics technology to prepare electronic devices is simple and does not require the use of a large number of chemical reagents. The emissions of waste water and toxic gases are greatly reduced, and the goals of green, environmentally friendly and energy-saving production are well achieved.
