The global Printed Resistive Heaters market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Printed resistive heaters are made of conductive silver ink traces and busbars printed on top of a substrate. Their resistance value changes very little, or remains "fixed," as voltage drives current through the silver traces, causing them to heat up. Temperature regulation can be achieved with an external controller or battery pack.
