Printed tempered glass is a type of glass that undergoes a printing process on its surface. Tempered glass itself is strengthened through a special heating and cooling process to enhance its strength and thermal resistance. In printed tempered glass, patterns, text, or designs are added to the surface using printing technology. This printing often uses ceramic inks, which are fused to the glass surface at high temperatures, integrating the printed design with the glass. This process not only enhances the aesthetic appeal but also maintains the strength and durability of the tempered glass.
