A printer ink cartridge chip is a small electronic component embedded in ink cartridges that communicates with the printer to manage functions such as ink level monitoring, cartridge authentication, and print quality optimization. Found in both inkjet and laser printers, the chip stores data about cartridge type, usage history, and remaining ink, helping ensure accurate tracking and proper printer operation.

In many cases, the chip also enforces brand-specific compatibility, which may prevent the use of third-party or refilled cartridges unless reset or replaced. While this enhances performance and user alerts, it has also raised concerns about cost and recyclability.
