Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the Private Narrowband IoT market.

Private narrowband IoT is a low power wide area technology, which is developed to allow an extensive range of new IoT devices and services. The private narrowband IoT improves power consumption of user devices, system capacity, and spectrum efficiency. In recent years, mobile operators have been deploying network capabilities enabling narrowband-IoT coverage for their customers, which boosts the market growth. NB-IOT are deployed for a number of applications including smart metering (water, electricity and gas), intruder, and fire alarms for commercial properties, facility management services, tracking of people, animals, or objects. Private NB-IoT offers extended coverage and higher security over its substitutes, which fuels growth of the market.

According to our research, the number of global connected IoT devices was about 14 billion, grew by 18% compared to 2021. The data released by the Office of the Central Cyberspace Affairs Commission shows that, by the end of 2022, China has built and opened a total of 2.3 million 5G base stations. 110 cities across the country have reached the gigabit city construction standards. Gigabit optical network has the ability to cover more than 500 million households. IPv6 scale deployment application is deeply promoted. The number of active users exceeds 700 million, mobile network IPv6 traffic accounted for nearly 50%. The total size of China's data center racks exceeds 6.5 million standard racks, with an average annual growth rate of more than 30% in the past five years.
