Probe pins, also known as test pins or test probes, are small metallic components used in electronic testing and measurement applications. These pins are designed to make temporary electrical contact with specific points on a device under test (DUT), allowing for testing, debugging, or other diagnostic activities. Probe pins are commonly used in conjunction with testing equipment such as oscilloscopes, multimeters, logic analyzers, and automated test systems. Probe pin consists of three parts: a plunger, a pipe(barrel), and a spring. The structure has a spring inside the pipe, and the tip (= plunger) strokes to make an appropriate load and contact with the electrode to be inspected, and perform the electrical inspection.
