Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

Micropositioners, also referred to as, positioners, manipulators, micromanipulators and probe heads, position the probe arm and probe tip in the die. These devices are truly the workhorses of the modern probe station. Micropositioners are held in place by magnets, vacuum, or, in special applications, fixed in place with bolts.

All micropositioners are equipped with mechanisms to adjust the probe tip in three planes, X, Y, and Z. Some micropositioners also have a roll adjustment to align the angle of the probe tip for RF or Optical measurements.

The global market for Probe Station Micropositioners is estimated to increase from US\$ million in 2021 to reach US\$ million by 2028, exhibiting a CAGR of % during 2022-2028. Keeping in mind the uncertainties of COVID-19 and Russia-Ukraine War, we are continuously tracking and evaluating the direct as well as the indirect influence of the pandemic on different end use sectors. These insights are included in the report as a major market contributor.

The APAC Probe Station Micropositioners market is expected at value of US\$ million in 2022 and grow at approximately % CAGR during 2022 and 2028.

The United States Probe Station Micropositioners market is expected at value of US\$ million in 2022 and grow at approximately % CAGR during 2022 and 2028.

The Europe Probe Station Micropositioners market is expected at value of US\$ million in 2022 and grow at approximately % CAGR during 2022 and 2028.

The China Probe Station Micropositioners market is expected at value of US\$ million in 2022 and grow at approximately % CAGR during 2022 and 2028.
