The global Process Gas Centrifugal Compressors market size is predicted to grow from US\$ 3578 million in 2025 to US\$ 4421 million in 2031; it is expected to grow at a CAGR of 3.6% from 2025 to 2031.

The impact of the latest U.S. tariff measures and the corresponding policy responses from countries worldwide on market competitiveness, regional economic performance, and supply chain configurations will be comprehensively evaluated in this report.

This report mainly focus on Centrifugal Compressors used for process gas market. Process Gas Compressor is mechanical device that increases the pressure of process gas such as argon, ethylene, fluorine, helium, hydrogen, oxygen, neon, silane, TFE, xenon and other gases, by reducing its volume. This report does not cover compressors for air and nitrogen. Centrifugal compressors, sometimes called radial compressors, are a sub-class of dynamic axisymmetric work-absorbing turbomachinery.

The Asia-Pacific has shown the fastest growth rate corresponding to the industrial and consumer market growth of India and China and also the gas demand growth from developed countries such as Australia. Recent developments in the end-user industry are expected to be a major driver for the process gas compressor market's growth in the region. End users like oil and gas, power generation, and manufacturing industry, all are anticipated to witness significant growth which will further aid the growth of the process gas compressors. Moreover, supporting government initiatives and increasing investments in the region also foreshadow the growth of the manufacturing industry, especially in China and India. For instance, in India, the Make In India and Production Linked Incentive (PLI) schemes gave the manufacturing industry a substantial boost in various verticals. In addition, according to the India Brand Equity Foundation, by 2025,

the Indian manufacturing sector has the potential to reach USD 1 trillion.
