The global Process Gas Chromatography market size is predicted to grow from US\$ 2166 million in 2025 to US\$ 2900 million in 2031; it is expected to grow at a CAGR of 5.0% from 2025 to 2031.

The impact of the latest U.S. tariff measures and the corresponding policy responses from countries worldwide on market competitiveness, regional economic performance, and supply chain configurations will be comprehensively evaluated in this report.

Process gas chromatography is used for separating and analyzing chemical compounds in the gas phase of industrial processes. Gas chromatograph instruments vaporize and distribute samples between a stationary and mobile phase, whereby a chemically inert gas carries molecules through a heated column.

The gas chromatography market is expected to primarily grow with the increasing use of chromatography across several vertical industries. Gas chromatography is used to determine the quality of chemicals and their toxicity in products and is currently used across multiple industry verticals to separate complex mixtures. Growing application scope of gas chromatography technology, growing demand for gas chromatography systems, advancements in gas chromatography technology, growing demand for environmental monitoring, and supportive government funding for the development of advanced gas chromatography technologies are the major factors expected to manage gas chromatography in terms of market potential until 2029. Combination of gas chromatography and mass spectrometry is expected to gain popularity in the coming years due to the high usage of gas chromatography and mass spectrometry in various applications such as environmental analysis, drug detection, etc.
