The global Process Pilot Burners market size is predicted to grow from US$ 448 million in 2025 to US$ 627 million in 2031; it is expected to grow at a CAGR of 5.8% from 2025 to 2031.

The process pilot burner is a key component used to ignite the main burner or heating equipment in industrial combustion systems. It is widely used in boilers, furnaces, gas turbines and various heating devices. It ensures that the mixture of fuel and air can be ignited quickly and safely by generating a stable small flame. The process pilot is designed to continuously provide a stable flame and reliably ignite the main burner even in harsh environments. Its flame monitoring system (such as ultraviolet or infrared sensors) ensures the presence of the flame. If the flame is accidentally extinguished, the control system will immediately cut off the fuel supply to prevent the accumulation of unburned gas and ensure safety.

United States market for Process Pilot Burners is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.
