## Abstracts

The global Process-scale Tangential Flow Filtration (TFF) System market size is predicted to grow from US$ 1080 million in 2025 to US$ 1814 million in 2031; it is expected to grow at a CAGR of 9.0% from 2025 to 2031.

Process-scale Tangential Flow Filtration (TFF) System is a commercial production device with large-scale processing capabilities. Tangential flow filtration (TFF), also known as Cross-flow filtration, is a process of separation widely used in bio-pharmaceutical and food industries. It is different from other filtration systems in that the fluid is passed parallel to the filter, rather than being pushed through a membrane perpendicularly which can clog the filter media. This method is preferred for its continuous filtration and reproducible performance. The particles that pass through the membrane, the permeate, are put off to the side, while the rest, the retentate, is recycled back to the feed.

United States market for Process-scale Tangential Flow Filtration (TFF) System is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.

China market for Process-scale Tangential Flow Filtration (TFF) System is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.

Europe market for Process-scale Tangential Flow Filtration (TFF) System is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.
