However, product differentiation, reducing costs, and supply chain optimization remain crucial for the widespread adoption of Product Traceability System (PTS). Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the Product Traceability System (PTS) market.

Product Traceability System (PTS) is a production control system that can perform forward, reverse, and non-directional tracking of products, and is applicable to any product. Through the traceability system, the cycle management of goods from the procurement of raw materials and auxiliary materials, product production, warehousing, sales and service can be realized to achieve “ security can be warned, sources can be traced, flows can be tracked, information can be queried, responsibilities can be identified, Product recall ”function.

Product Traceability System (PTS) is not to supervise enterprises but to help enterprises establish brand images and enhance social effects and economic benefits.

Full-process tracking management not only strengthens enterprise quality management, reduces error correction costs, but also facilitates enterprises to collect product intelligence, understand consumer trends, and improve rapid response capabilities. In the field of process manufacturing, especially in the fields of food safety, pharmaceutical production, and some chemical product manufacturing, establishing a Product Traceability System (PTS) has become one of the important management methods for enterprises to survive. In discrete manufacturing companies, such as automobiles and electronic products, when quality problems occur, a traceability system can be established to quickly identify the relevant batches and the key to the quality problem, and recall the relevant batches of products. On the one hand, consumers' problems can be quickly dealt with. At the same time, recall losses are reduced.
