A production scheduler is a software-based information system that aids in creating production plans and schedules within a factory. It translates production plans into specific timelines, detailing start and completion dates for each product, task assignments, worker allocation, and detailed machine operation times. In factories with multiple processes and various manufacturing facilities, production scheduling considers orders, quantities, and delivery deadlines to ensure efficient use of resources while meeting customer demands.

Effective production scheduling is crucial for profit generation, requiring efficient utilization of personnel, facilities, and materials, and adherence to delivery deadlines. The production scheduler supports schedule creation and enables real-time adjustments based on feedback from the manufacturing site, thus broadening the capability beyond those intimately familiar with the processes.
