## Abstracts

The global Professional Pet Care Management Software market size is predicted to grow from US\$ 145 million in 2025 to US\$ 231 million in 2032; it is expected to grow at a CAGR of 7.1% from 2026 to 2032.

Professional pet care management software is an integrated digital operation platform designed specifically for pet service agencies such as pet beauty salons, pet boarding centers, pet training institutions, pet daycare centers, and pet stores. By integrating customer relationship management, online appointment booking, payment systems, and marketing tools, the software helps practitioners improve operational efficiency, reduce human error, and enhance customer retention. Furthermore, the accompanying mobile app allows pet owners to access their pet's health records, receive reminders, and renew services at any time, completing the digital closed-loop service process. This not only optimizes the user experience but also drives the entire pet service industry towards professionalization, standardization, and intelligent advancement.

The development of professional pet care management software is driven by multiple factors, including the rapid growth of the pet economy, increasing demands from pet owners for professional and transparent services, intensified industry competition driving operational efficiency optimization, increased management complexity due to the integration of multiple business models, and the widespread adoption of mobile internet and SaaS technologies lowering the barriers to digitalization. As pets are seen as family members, customers expect personalized, traceable, and convenient service experiences, prompting pet service providers to leverage digital tools to maintain customer relationships, standardize service processes, and make data-driven decisions. At the same time, the demand for access to ecosystem resources such as payment, insurance, and e-commerce is accelerating the evolution of management software

towards openness, intelligence, and end-to-end collaboration.
