Abstracts

The global Professional Pet Care Software market size is predicted to grow from US\$ 142 million in 2025 to US\$ 227 million in 2032; it is expected to grow at a CAGR of 7.1% from 2026 to 2032.

Professional pet care software is an intelligent management platform designed for pet care companies that provide high-quality services such as pet beauty salons, pet shops, foster care centers, and training institutions.

The development of professional pet care software is primarily driven by the rapid growth of the 'pet economy,' rising demand among pet owners for refined and humanized services, intensified industry competition necessitating operational efficiency improvements, the accelerating standardization of veterinary diagnostics and grooming/boarding services, and the widespread adoption of mobile internet and smart devices. Concurrently, stricter regulatory requirements regarding compliance in veterinary medicine?coupled with consumer expectations for service transparency?have further accelerated the adoption of digital management tools. Future trends will focus on cloud-based collaboration and multi-platform connectivity; AI-assisted health alerts and customer insights; the integration of electronic medical records with data from wearable devices; cross-sector service integration; and the enhancement of customer retention and repurchase rates through automated marketing and membership lifecycle management?thereby propelling the continuous evolution of pet care services toward greater intelligence, personalization, and comprehensive, closed-loop ecosystems.
