The report requires updating with new data and is sent in 48 hours after order is placed.

According to this study, the global Professional Service Robotics market size will reach US\$ 191400 million by 2030.

Professional service robots are a type of robot typically considered for use outside of a manufacturing facility within a professional setting. While industrial robots automate manufacturing tasks, professional service robots, which vary greatly in form and function, automate menial, dangerous, time-consuming, or repetitive tasks, effectively freeing human workers to perform more cognitive functions.

Most professional service robots are semi-autonomous or fully autonomous robots with some form of mobility. There are service robots that are intended to interact with people, typically deployed in a retail, hospitality, healthcare, warehouse or fulfillment setting. Others are deployed in more rugged settings, such as in space and defense, agricultural applications, and demolition, to automate dangerous or laborious tasks.
