**Steroid drug industry** As endogenous drugs in the human body, steroid drugs have a clear role in maintaining life, body development, immune mediation, skin disease treatment and birth control. They have strong anti-infectious, anti-allergic, anti-viral and anti-inflammatory properties. The pharmacological effects of shock are widely used in the treatment of skin diseases such as rheumatoid arthritis, bronchial asthma, eczema, and endocrine diseases such as anaphylactic shock and prostatitis. It is also used in assisted reproduction, contraception, alleviation of female menopausal symptoms, surgical anesthesia, and prevention. Coronary heart disease and AIDS, weight loss, etc. There are a wide variety of steroid hormone drugs, including progestins, estrogens, androgens, glucocorticoids, and mineralocorticoids. Steroid drugs have a long industrial chain. According to different process routes and products of steroid drugs, they are

divided into starting materials, important intermediates, raw materials and preparations. The product characteristics of steroid hormones and the special requirements for dedicated line production make the industry entry barriers high and technically difficult. Starting from sterol, important intermediates such as androstenedione (4AD), androstenedione (AAD), 9-OH-androstenedione (9-OH-AD), and BA are produced through microbial fermentation. body, derived from various downstream steroid hormone raw materials and preparations. The steroid hormone industry chain is long, the division of labor is detailed, and various enterprises specialize in different subdivisions. In recent years, the gradual application and implementation of new technologies such as synthetic biology and enzyme catalysis will further optimize the production process of the steroid hormone industry chain and improve production efficiency.
