The global Program-Controlled Rotational Viscometer market size is predicted to grow from US$ million in 2025 to US$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

The program-controlled rotational viscometer is an instrument used to measure the viscosity of a liquid. Its characteristic is that the rotational speed and temperature can be automatically adjusted by an electronic controller, so as to realize automatic measurement and recording. It adopts the principle of rotary measurement, that is, the liquid is placed on a rotating disk, and the viscosity of the liquid is calculated by measuring the resistance of the disk when it rotates. Program-controlled rotational viscometers are widely used in chemical, pharmaceutical, food, plastic and other industries, and can be used for viscosity measurement in quality control, R&D and production processes.

United States market for Program-Controlled Rotational Viscometer is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Program-Controlled Rotational Viscometer is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
