The global Programmable Pump Electric Pressure Calibrator market size is predicted to grow from US$ 201 million in 2025 to US$ 347 million in 2032; it is expected to grow at a CAGR of 8.3% from 2026 to 2032.

In 2024, global annual sales of programmable pump electric pressure calibrators will reach approximately 28,000 units, with an average unit price of approximately $6,800. Programmable pump electric pressure calibrators are a type of metrological equipment that utilizes a built-in electric pump or electronically controlled servo system to generate a stable, adjustable pressure source. Combined with high-precision pressure sensors and intelligent control algorithms, they enable rapid, automated calibration of pressure sensors, transmitters, pressure gauges, and related instruments. Compared to traditional manual or pneumatic calibrators, programmable electric pressure calibrators offer advantages such as stable output, high adjustment accuracy, highly automated operation, and a wide range of applications (covering pressures from vacuum to hundreds of MPa). They are often equipped with color touchscreens, human-machine interfaces, and data storage/wireless transmission capabilities. They are widely used in process control and metrology laboratories in the petrochemical, power, aerospace, pharmaceutical, and high-end manufacturing industries. The upstream supply chain primarily involves high-precision pressure sensors, electric pumps and servo motors, seals and alloy materials, and control electronics modules. The downstream supply chain includes national metrology institutes, third-party calibration agencies, petrochemical and energy groups, aerospace manufacturers, pharmaceutical, and equipment manufacturers. These products are essential equipment for process industries and high-precision metrology assurance.
