The global Projector for Volumetric Display market size is predicted to grow from US\$ 202 million in 2025 to US\$ 246 million in 2031; it is expected to grow at a CAGR of 3.3% from 2025 to 2031.

The impact of the latest U.S. tariff measures and the corresponding policy responses from countries worldwide on market competitiveness, regional economic performance, and supply chain configurations will be comprehensively evaluated in this report.

A Projector for volumetric display is defined as equipment which helps in generation and scattering of visible radiation from a set of localized and particular regions within a three-dimensional space. It includes visual display devices that form a visual representation of a three-dimensional object. These techniques work on a combination of prominent components. It creates 3D imagery via the emission scattering or relaying of illumination from well-defined regions in space. These displays are auto-stereoscopic and generate 3D imagery which can be seen with the naked eye. It is a promising technology which is widely applicable in the automotive, aerospace, defence, medical and industrial sector.

An increase in demand for advanced medical imaging devices is a major factor driving the market. In addition, technological enhancements in 3D displays and increased application of LED & LCD technology further stimulates the demand for such systems. However, the need for advanced software and electronic components may obstruct the growth of the market. Nevertheless, prospective growth opportunities found in telemedicine and surgery may boost the market in forthcoming years. Lack of technological knowledge is the main challenge for this market.
