A propane air heater is a type of portable space heater that uses propane gas as its fuel source to generate heat. It typically consists of a propane tank, a burner mechanism, and a heat exchanger. When propane is released into the burner, it mixes with air and is ignited, producing a flame that heats the air passing over the heat exchanger. This warmed air is then circulated into the surrounding space, providing warmth and comfort. Propane air heaters are known for their efficiency, portability, and ability to heat large areas quickly.

The global Propane Air Heater market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of %from 2024 to 2030.
