A propane floor burnisher is a high-performance floor polishing device powered by propane gas. It is mainly used for high-speed polishing and surface treatment of hard floors (such as concrete, stone, ceramic tiles, vinyl floors, etc.) in commercial, industrial or large public places. This type of machine is usually equipped with a powerful engine that can achieve a polishing speed of 1500 to 3000 rpm, which can quickly restore the gloss of the floor and improve the appearance and wear resistance of the floor. Compared with electric or battery-driven polishers, propane polishers are not restricted by power cords and are suitable for large-area, continuous operations, while reducing interruption time and improving work efficiency. It is often equipped with a dust control system to reduce dust flying and meet environmental and safety requirements. However, since it uses flammable gases, special attention should be paid to ventilation and safety regulations during operation.

United States market for Propane Floor Burnishers is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.
