## Abstracts

The global Propylcyclohexane market size is predicted to grow from US\$ 171 million in 2025 to US\$ 240 million in 2032; it is expected to grow at a CAGR of 5.0% from 2026 to 2032.

Propylcyclohexane is a saturated cyclic hydrocarbon (C<sub>9</sub>H<sub>18</sub>) consisting of a cyclohexane ring substituted with a propyl group, typically used as a specialty solvent, intermediate in organic synthesis, and model compound in fuel and catalytic studies due to its stable, non-polar structure. Its supply chain begins upstream with petrochemical feedstocks such as benzene and propylene derived from crude oil refining or steam cracking; these undergo hydrogenation (benzene → cyclohexane) and alkylation (cyclohexane + propylene → propylcyclohexane) using acid or metal catalysts. Midstream, the product is purified via distillation to high-purity grades depending on application requirements. Downstream, it is distributed to chemical manufacturers, research institutions, and niche industrial users in fuels testing, fine chemicals, and specialty solvents, with logistics typically handled through bulk chemical distributors or integrated petrochemical supply networks. In 2025, global Propylcyclohexane output was about 90,000 tons with 120,000 tons of capacity, average prices of USD 1,800-3,500 per ton, and gross margins around 22%.

United States market for Propylcyclohexane is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Propylcyclohexane is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
