Abstracts

The global Propylene Glycol Ethyl Ether market size is predicted to grow from US$ 1524 million in 2025 to US$ 2187 million in 2032; it is expected to grow at a CAGR of 5.4% from 2026 to 2032.

In 2024, global Propylene Glycol Ethyl Ether production reached approximately 1,240 kilotons, with an average global market price of around US$ 1,200 per ton. Propylene Glycol Ethyl Ethers are a group of organic solvents derived from the reaction of propylene oxide with ethanol, resulting in mono-, di-, or tripropylene glycol ether structures. They are clear, colorless, and moderately volatile liquids with good solvency for both polar and nonpolar substances. Known for their high boiling points, low viscosity, and excellent coupling ability, they are widely used as coalescing agents and solvents in paints, inks, coatings, cleaning products, and chemical formulations. Their favorable balance of water solubility and organic solvency makes them useful in water-based systems, where they help improve flow, film formation, and drying performance.

The market for Propylene Glycol Ethyl Ethers is primarily driven by the growing demand for water-based paints, coatings, and inks, where they serve as effective coalescing agents and solvents to improve flow, film formation, and drying properties. Their use is further supported by the expanding cleaning and household products sector, where their strong solvency helps in removing oils, greases, and dirt. Additionally, increasing applications as coupling agents and reaction media in pharmaceuticals, agrochemicals, and specialty chemical formulations are boosting demand. Regulatory shifts favoring low-toxicity and low-VOC solvents are accelerating their adoption as safer alternatives to traditional solvents, while rapid industrialization and construction growth in emerging markets continues to stimulate downstream demand.
