The global Propylene Glycol (PG) market size is predicted to grow from US\$ 6151 million in 2025 to US\$ 6915 million in 2031; it is expected to grow at a CAGR of 2.0% from 2025 to 2031.

Propylene Glycol (PG), also known as 1, 2-propanediol or mono-propylene glycol (MPG), is a clear, colorless liquid with a syrup-like consistency and the chemical formula $C_3H_8O_2$. PG is widely used in various industries due to its versatility. Its primary application is in the production of unsaturated polyester resins (UPRs), which are essential for surface coatings and glass fiber-reinforced resins, commonly used in the construction, automotive, and industrial sectors. Additionally, Propylene Glycol is a key component in functional fluids, such as deicing and antifreeze solutions, critical for the aviation and automotive industries. It is also used in plasticizers, hydraulic brake fluids, and non-ionic detergents. Moreover, PG serves as a humectant in pharmaceuticals, cosmetics, animal feed, and tobacco, and is valued for its effectiveness as a solvent and extractant.

Globally, the Propylene Glycol market is led by major manufacturers such as Dow, LyondellBasell, INEOS, BASF, and ADM, which together control over 60% of the market share. The European Union is the largest regional market, accounting for more than 25% of global consumption, driven by its demand for surface coatings and reinforced resins. The United States and China are also significant markets, with these two regions contributing more than 35% of global demand. Industrial-grade PG is the most widely produced and consumed type, making up about 75% of total production due to its extensive use in industrial processes, particularly in UPR manufacturing.

Looking ahead, Propylene Glycol is expected to see sustained growth, particularly in the unsaturated polyester resin (UPR) market, as industries such as construction, automotive, and coatings continue to expand. Additionally, rising demand for sustainable and environmentally friendly products in the cosmetics, pharmaceutical, and food sectors will drive further use of PG, especially as a humectant. As global environmental regulations tighten, manufacturers are expected to invest in greener and more sustainable production methods for PG. With its broad range of applications and ongoing innovation, Propylene Glycol is well-positioned for continued growth across both developed and emerging markets.
