According to our LPI (LP Information) latest study, the global Prostaglandin market size was valued at US\$ 472.9 million in 2023. With growing demand in downstream market, the Prostaglandin is forecast to a readjusted size of US\$ 777.7 million by 2030 with a CAGR of 7.4% during review period.

The research report highlights the growth potential of the global Prostaglandin market. Prostaglandin are expected to show stable growth in the future market. However, product differentiation, reducing costs, and supply chain optimization remain crucial for the widespread adoption of Prostaglandin. Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the Prostaglandin market.

Prostaglandins are autocank derived from arachidonic acid. They both sustain homeostatic functions and mediate pathogenic mechanisms, including the inflammatory response. Prostaglandins control several processes in the body, especially as it relates to the healing process. When tissue is damaged or infected, this group of hormones will create the reactions that cause pain, fever and inflammation, which sparks the healing process. Prostaglandins also stimulate the formation of a blood clot and the contraction of the blood vessel wall when body is bleeding. Once blood clots are no longer needed and the injury begins to heal, another prostaglandin will stimulate the changes that allow the clots to dissipate and the blood vessel wall to relax.

Europe is the largest consumption place, with a consumption market share nearly 35% in 2019. Following Europe, North America is the second largest consumption place with the consumption market share of about 27%.

CEPIA, Johnson Matthey and Pfizer are the main manufacturers of prostaglandin, they take about 65% of the whole market.
