The global Protection Films for Medical Devices market size is predicted to grow from US\$ 819 million in 2025 to US\$ 1277 million in 2032; it is expected to grow at a CAGR of 6.5% from 2026 to 2032.

In 2025, the global output of protection films for medical devices reached 620,000,000 square meters, with an average selling price of USD 1.35 per square meter, production capacity of 780,000,000 square meters, and a gross margin of 38%.

Protection films for medical devices are functional film materials applied to cover and protect the surfaces of medical devices from scratches, contamination, chemical exposure, or microbial attachment during manufacturing, assembly, transportation, storage, and prior to clinical use. These films are typically based on polymer materials such as polyethylene or polyurethane and are combined with low-tack or removable adhesive layers to ensure secure adhesion and residue-free removal. They are widely used on disposable medical devices, reusable equipment, diagnostic instruments, and the housings or touch surfaces of high-end medical devices.

The protection films for medical devices market is experiencing steady growth, driven by increasing global medical device production, higher requirements for surface appearance and cleanliness, and the rising value of high-end medical equipment. As medical devices become more precise, digitalized, and value-added, manufacturers are placing greater emphasis on surface protection, accelerating the upgrade of protection films from basic scratch resistance to antimicrobial, chemical-resistant, and low-extractable performance. Regionally, Asia-Pacific is the largest production and consumption market due to its strong medical device manufacturing base, while North America and Europe focus more on regulatory compliance, biocompatibility, and stable

peel performance. Competition centers on material safety, performance consistency, and compatibility with customer manufacturing processes.
