According to this study, the global Protein Production Service market size will reach US\$ 21900 million by 2031.

Protein production, the method of generating some quantity of a specific protein in biotechnology

The protein production market is driven by the increasing demand for proteins in various applications, such as biopharmaceuticals, research, and industrial processes. Proteins play a crucial role in drug development, disease understanding, and protein-based products, driving the need for efficient protein production methods. Advancements in biotechnology and genetic engineering have enabled the production of complex proteins and recombinant proteins at larger scales, further propelling market growth. However, challenges include the high cost and complexity of protein production processes, potential issues related to protein folding and post-translational modifications, and the need for continuous research to optimize protein expression and purification. Overcoming these challenges through technological advancements, process optimization, and cost-effective solutions will be essential for the sustained growth of the protein production market.
