The global Protein Wet Blotting System market size is predicted to grow from US$ 346 million in 2025 to US$ 510 million in 2032; it is expected to grow at a CAGR of 5.8% from 2026 to 2032.

The protein wet transfer system is a device used to transfer proteins from gels to membranes (such as nitrocellulose or polyvinylidene fluoride membranes) and is widely used in Western Blot experiments. This system promotes the movement of proteins from the gel to the membrane by creating an electric field in a tank filled with transfer buffer. It is generally suitable for transferring larger molecular weight proteins because it keeps the gel moist and reduces protein diffusion losses. Wet transfer is known for its high transfer efficiency and stability, and is suitable for protein quantification and high-sensitivity detection needs.

United States market for Protein Wet Blotting System is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Protein Wet Blotting System is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
