The global PS Diffusion Plate market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

PS diffusion plate is a kind of material with light diffusion properties in the PS (polystyrene) plate category. It is one of the diffusion plate categories in acrylic (PMMA), PC, PP, PS and other materials.

The PS diffusion plate has certain optical characteristics of plastic sheets such as haze, light transmittance, and refractive index. It can effectively convert point or line light sources into soft and uniform surface light sources. On the premise of achieving good light transmittance, at the same time It has good light source lattice shielding properties and is relatively affordable, so it is widely used in the booming LCD-TV and LED lighting products. It adds an optical diffusion material for the secondary light distribution of LED lighting products. choose.
