Pseudobulbar affect (PBA) is a condition marked by uncontrollable and inappropriate laughing or crying. People with specific neurological diseases or injuries, which may impair the brain's regulation of emotion, are more likely to have pseudobulbar affect. Pseudobulbar affect (PBA) treatment aims to minimize the severity and frequency of emotional outbursts. Antidepressants, including tricyclic antidepressants (TCAs) and selective serotonin reuptake inhibitors (SSRIs), can help lower the severity and frequency of your PBA episodes. Antidepressants used to treat PBA are usually prescribed in lower doses than those used to treat depression. The only medicine approved by the Food and Drug Administration to treat PBA is Nuedexta.

The global pharmaceutical market is 1475 billion USD in 2022, growing at a CAGR of 5% during the next six years. The pharmaceutical market includes chemical drugs and biological drugs. For biologics is expected to 381 billion USD in 2022. In comparison, the chemical drug market is estimated to increase from 1005 billion in 2018 to 1094 billion U.S. dollars in 2022. The pharmaceutical market factors such as increasing demand for healthcare, technological advancements, and the rising prevalence of chronic diseases, increase in funding from private & government organizations for development of pharmaceutical manufacturing segments and rise in R&D activities for drugs. However, the industry also faces challenges such as stringent regulations, high costs of research and development, and patent expirations. Companies need to continuously innovate and adapt to these challenges to stay competitive in the market and ensure their products reach patients in need. Additionally, the COVID-19 pandemic has highlighted the importance of vaccine development and supply chain management,

further emphasizing the need for pharmaceutical companies to be agile and responsive to emerging public health needs.
