## Abstracts

The global Pseudouridine Triphosphate Tetrasodium Salt Solution market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

Pseudouridine triphosphate tetrasodium salt solution is a phosphorylated derivative of pseudouridine (Pseudouridine), which exists in the form of tetrasodium salt. Pseudouridine is a modified nucleoside and the 'fifth nucleoside' in RNA. It was discovered in 1951. The pseudouridine triphosphate formed after phosphorylation combines with four sodium ions to form pseudouridine triphosphate tetrasodium salt. The molecular formula of this compound may vary depending on the specific product, but generally contains elements such as C, H, N, O, P, and Na, and its molecular weight is also relatively large. Pseudouridine triphosphate tetrasodium salt has important biological functions in organisms. As a modified component of RNA, it is widely present in a variety of RNA molecules such as tRNA, mRNA, snRNA, and snoRNA, and has a profound effect on the structure and function of RNA. Studies have shown that replacing uridine with pseudouridine can significantly reduce the immunogenicity of in vitro transcribed mRNA and improve the stability and expression intensity of mRNA. This characteristic makes pseudouridine triphosphate tetrasodium salt have broad application prospects in biotechnology fields such as mRNA vaccines and gene therapy.

The development status and dynamics of the pseudouridine triphosphate tetrasodium salt solution market can be summarized from the following aspects:

Pseudouridine triphosphate tetrasodium salt solution has important application value in the research and development of mRNA vaccines. Studies have shown that replacing uridine with pseudouridine can significantly reduce the immunogenicity of in vitro

transcribed mRNA and improve the stability and expression intensity of mRNA, which provides strong support for its application in the field of vaccine development. In addition, pseudouridine is also widely used in oligonucleotides, aptamers, epigenetics or DNA damage research, in vitro transcription (IVT), mutation induction, photocrosslinking research and other fields, further broadening its market demand.

With the continuous development of biotechnology, the production process and technical level of pseudouridine and its derivatives are also constantly improving. This will help reduce production costs, improve product quality and stability, and further promote the development of the pseudouridine triphosphate tetrasodium salt solution market.

In summary, the pseudouridine triphosphate tetrasodium salt solution market is in a rapid development stage and has broad market prospects and development potential.
