PSH Lifting and Traversing Garage is an intelligent car Parking System, its full name is 'Puzzle Parking System with Lifting and Transferring'. It is a mechanized car parking system, through the way of lifting and transverse movement, to achieve multi-level, multi-row parking, the car vertical lift and lateral movement, in order to achieve more parking spaces in a limited space. A PSH Lift and move garage usually consists of one or more parking levels, each with multiple parking spaces. After the vehicle enters the garage, the vehicle is lifted to the appropriate position through the electric lifting device, and then the vehicle is moved to the appropriate parking space through the transverse movement device. When the vehicle needs to be removed, the lift and traverse device will move the vehicle back to the pickup area for the owner to remove. Such garage systems typically use automated control systems that can be operated by remote control or self-service terminals, enabling a fast and efficient parking and pickup process. It can significantly save parking space, improve parking efficiency, reduce parking congestion problems, especially suitable for areas in the city where parking spaces are tight.

The global PSH Lifting and Traversing Garage market size is projected to grow from US\$ million in 2023 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
