## Abstracts

The global Pt-Ru/C Catalyst market size is predicted to grow from US\$ 28.08 million in 2025 to US\$ 37.72 million in 2032; it is expected to grow at a CAGR of 4.4% from 2026 to 2032.

Platinum-ruthenium-carbon (Pt-Ru/C) catalyst is a high-performance bimetallic electrocatalyst composed of platinum (Pt) and ruthenium (Ru) nanoparticles deposited on a carbon support. It is a key anode material for energy devices such as direct methanol fuel cells. The introduction of ruthenium effectively solves the problem of pure platinum being easily poisoned by carbon monoxide, significantly improving its anti-poisoning ability, catalytic activity, and stability.

The upstream segment primarily consists of precious metal raw materials (platinum and ruthenium) and support materials (high-surface-area activated carbon, carbon nanotubes, etc.). Since platinum and ruthenium are scarce strategic resources, upstream companies possess strong bargaining power, and price fluctuations directly determine the cost of the catalyst.

Global sales in 2025 are projected to be approximately 700 kilograms, with an average market price of approximately US\$41,000 per kilogram. The industry's gross profit margin is in the range of 30%–45%.

United States market for Pt-Ru/C Catalyst is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
