The global PTC Direct Heating Bottle Warmer market size is predicted to grow from US\$ 654 million in 2025 to US\$ 926 million in 2032; it is expected to grow at a CAGR of 5.2% from 2026 to 2032.

PTC direct heating bottle warmers are rapid, self-regulating liquid heating devices that use positive temperature coefficient (PTC) ceramic heating elements. They achieve heat transfer through direct or near-direct contact between the heating element and the liquid container, offering enhanced safety and ease of use. The upstream supply chain primarily consists of core component and electronic control suppliers, including PTC ceramic heating element manufacturers, thermostat and PCB board suppliers, and plastic/metal mold and casing manufacturers. The downstream supply chain directly serves end consumers and sales channels, including maternal and infant product brands, online e-commerce platforms, chain maternal and infant stores, and large supermarkets. The demand for this product fundamentally stems from the core pursuit of 'efficiency, safety, and convenience' in modern childcare. Specific driving forces include: the urgent need for new parents to quickly and stably heat breast milk or formula at night or during busy times; consumers' desire to replace the slow, bacterial-prone, and safety-risk aspects of traditional water bath heating methods; and the continuous upgrading trend in the global maternal and infant market towards smarter, smaller, and easier-to-use products. In 2024, the production volume of PTC direct heating bottle warmers is estimated to be 15 million to 25 million units, with an average selling price of approximately US\$20 to US\$45 per unit, a gross profit margin of approximately 30%, and a single production line capacity of 300,000 to 650,000 units per year.
