The global PTC Thermistor Resettable Fuse market size is predicted to grow from US\$ 1438 million in 2025 to US\$ 2105 million in 2032; it is expected to grow at a CAGR of 5.7% from 2026 to 2032.

PTC Thermistor Resettable Fuse—commonly referred to as a PTC resettable fuse or polymeric positive temperature coefficient (PPTC) device—is an electronic component used to protect circuits from overcurrent conditions. Unlike traditional fuses, which need to be replaced after they blow, PTC resettable fuses automatically return to their normal state once the fault condition is cleared, offering a reusable and reliable means of circuit protection. In 2024 the production was 661.90 million units and the average price was \$2.1 per unit.

PTC thermistor resettable fuses, based on polymeric positive temperature coefficient materials, are seeing sustained demand across consumer electronics, telecom equipment, automotive electronics and industrial power supplies due to their self-resetting capability and cost-saving maintenance; as electronics miniaturization, rising power densities, and stricter safety and efficiency regulations drive broader adoption, suppliers have clear opportunities to capture growth in high-demand segments such as data centers, electric vehicles, and 5G infrastructure by focusing on miniaturization, reduced resistance, and integration with smart monitoring features.
