The global PTFE Clad Copper Plate market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

PTFE clad copper plate is a special composite material composed of polytetrafluoroethylene (PTFE) film and copper plate. PTFE is a high-performance plastic with excellent high temperature resistance, corrosion resistance and low friction coefficient, while the copper plate provides good electrical conductivity and mechanical strength. PTFE clad copper sheets are often used in the fields of electronics, communications and aerospace as the base material of high-frequency circuit boards. It has excellent dielectric properties and high temperature resistance, and can work stably in complex circuit environments. In addition, due to the low friction coefficient of PTFE, this composite material is also often used in applications where friction and wear need to be reduced, such as bearings and other components.
