The global PTFE Fabric market size is predicted to grow from US$ 634 million in 2025 to US$ 717 million in 2031; it is expected to grow at a CAGR of 2.1% from 2025 to 2031.

PTFE fabric is a fabric in which the warp and weft threads are 100% PTFE or e-PTFE.Expanded PTFE (EPTFE) is one of the more innovative variations in the processing and application of PTFE in recent times. In the late 1960’s, a process was developed to stretch PTFE film (known as expanded PTFE or ePTFE) to the point it becomes porous, thus allowing passage of small molecules such as air and water vapor, yet still repelling polar liquids such as water. Expanded PTFE, often fabric supported as part of a layered composite, found applications in areas such as in rain resistant breathable clothing and many industrial venting applications.

North America is the largest PTFE Fabric market with about 31% market share. China is follower, accounting for about 28% market share.The key manufacturers are WL Gore?Associates, CLARCOR, Shanghai JINYOU Fluorine Materials, DENTIK, TTG, DongYang JinLong Filtertech, JIFA Group, ACOTEX etc. Top 3 companies occupied about 63% market share.
