PTFE is a solid fluorocarbon and synthetic fluoropolymer. It has a high molecular weight. It is also hydrophobic therefore it does not absorb water.

PTFE has one of the lowest coefficient of friction of any solid. Therefore, it is almost impossible to glue something to PTFE. It does not matter what the material is or what glue is used.

PTFE is a polymer with a melting point of 326°C or 620°F. In addition, it also maintains its properties such as high strength, toughness and self-lubrication at the very low temperatures of -268°C or -450°F. At temperatures above 650°C or 1200°F, PTFE will undergo depolymerization. It is nonflammable.

A nut is a type of fastener with a threaded hole. Nuts are almost always used in

conjunction with a mating bolt to fasten multiple parts together. The two partners are kept together by a combination of their threads' friction (with slight elastic deformation), a slight stretching of the bolt, and compression of the parts to be held together.
