PTFE Lined Bellows?? are flexible, corrosion-resistant expansion joints designed for piping systems that handle aggressive chemicals, high-purity fluids, or extreme temperatures. They consist of a ??metal bellows (typically stainless steel)?? externally reinforced for pressure resistance, with an internally bonded ??PTFE (polytetrafluoroethylene) liner?? that provides a seamless, inert barrier against corrosive media like acids, alkalis, and solvents. The PTFE lining ensures non-contamination, non-stick properties, and smooth flow, while the metal bellows structure accommodates thermal expansion, vibration, and pipeline misalignment. These lined bellows operate reliably from ??-70°C to +260°C?? and are widely used in chemical processing, pharmaceuticals, and semiconductor industries where leak-proof performance and chemical inertness are critical. Their design combines the durability of metal with PTFE's near-universal chemical resistance, making them ideal for harsh environments where standard expansion joints would fail.

United States market for PTFE Lined Bellows is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.

China market for PTFE Lined Bellows is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.
