PTFE is a solid fluorocarbon and synthetic fluoropolymer. It has a high molecular weight. It is also hydrophobic therefore it does not absorb water.

PTFE has one of the lowest coefficient of friction of any solid. Therefore, it is almost impossible to glue something to PTFE. It does not matter what the material is or what glue is used.

PTFE is a polymer with a melting point of 326°C or 620°F. In addition, it also maintains its properties such as high strength, toughness and self-lubrication at the very low temperatures of -268°C or -450°F. At temperatures above 650°C or 1200°F, PTFE will undergo depolymerization. It is nonflammable.

A washer is a thin plate (typically disk-shaped, but sometimes square) with a hole

(typically in the middle) that is normally used to distribute the load of a threaded fastener, such as a bolt or nut.
