PTZ Cameras for Large Conference Rooms are professional video capture devices designed for large meeting rooms, enterprise conference centers, government facilities, education and training centers, and professional broadcasting environments. Based on Pan-Tilt-Zoom (PTZ) mechanisms, these cameras enable remote control of camera direction, viewing angles, and focal length adjustments. They typically provide high-definition or ultra-high-definition imaging, wide horizontal and vertical rotation ranges, high optical zoom capabilities, automatic tracking, preset position management, and multi-camera coordination functions, allowing coverage of large meeting spaces with more than 20 participants and supporting complex conferencing environments. Compared with fixed-view conference cameras, large conference room PTZ cameras offer greater flexibility in viewpoint adjustment, wider coverage, and higher professional performance, making them suitable for advanced video conferencing deployments. These products are widely used in enterprise large conference rooms, boardrooms, government organizations, telemedicine centers, universities, courts, and professional conference venues. Driven by the growth of hybrid work, remote collaboration, and intelligent meeting system upgrades, large conference room PTZ cameras are increasingly developing toward AI auto-tracking, 4K/8K imaging, intelligent framing, and cloud-based management. In 2025, the global PTZ camera for large conference rooms is estimated at approximately annual shipments of around 1,850,000 units and a price of approximately USD681.08 per unit. The market is expected to grow at a CAGR of approximately 10.8% over the next five years. Typical single-line production capacity ranges from 100,000 to 500,000 units per year, while high-end enterprise PTZ cameras
