Micro-phase separation structure polyurethane materials make it better than other biocompatible polymer materials, this structure is very similar to the blood vessel wall organism: the macro is a very smooth surface, but from the microscopic point of view, it is a lipid bilayer liquid matrix layer embedded with various kinds of intermediate glycoproteins and lipids. This macro-smooth, multi-phase separation structure makes microscopic vessel wall has excellent anti-clotting properties. Meanwhile PU also has excellent fatigue resistance, abrasion resistance, high elasticity and high strength, it is widely used in the field of biomedical materials for the production of artificial heart, artificial liver, artificial blood vessel and polymer controlled release of drugs, etc.
