PU film is a versatile substrate material that is extruded from either polyester or polyether, and can be used as a standalone textile or further laminated to surface materials to enhance performance of the finished textile. PU film is a high-performance material that possesses the durability of rubber while retaining the physical flexibility found in thermoplastics. It features excellent elasticity, transparency, low-temperature performance and resistance to oil, grease and abrasion. The different base chemical changes the physical performance of the TPU substrate. For example, polyester TPUs provide high resistance to chemical and oils while polyether TPUs offer excellent flexibility and tear resistance. Polycaprolactone TPU substrates are hydrolysis resistant and ideal for applications with prolonged water exposure.
