Abstracts

The global Pubis Model market size is predicted to grow from US$ 25.76 million in 2025 to US$ 38.53 million in 2032; it is expected to grow at a CAGR of 6.0% from 2026 to 2032.

In 2024, global Pubis Model production reached approximately 0.43 M units, with an average global market price of around US$ 42 per unit.A Pubis Model is a three-dimensional physical or digital representation of the pubic bone—the anteroinferior part of the hip bone that joins at the pubic symphysis. These models are used in medical education, surgical training, forensic study, and biomechanical research to illustrate the structure, articulation, and clinical relevance of the pubic region within the pelvis.

Core Structural Features

Material System: Utilizes polymer resins or composite polymers, with some high-end models utilizing medical-grade polyurethane, offering both strength and flexibility.

Structural Accuracy: Strictly adheres to anatomical proportions, with some models supporting sectional demonstrations of key structures such as the pubic symphysis, ischium, and acetabulum.

Disassembly: Modular assembly facilitates teaching demonstrations and segmented explanations.

Surface Treatment: Biomimetic coloring and a matte finish enhance realism and durability.

Supporting Functions: Some products can be embedded with sensors for mechanical experiments or surgical simulations.

Production Capacity

Conventional Teaching Model Manufacturers: Each factory has an annual production capacity of approximately 10,000–30,000 units, primarily supplying medical schools and laboratories.

Specialized Medical Simulation Manufacturers: Each factory has an annual production capacity of 60,000–80,000 units, supporting customized development and gradually entering the research and clinical simulation markets.

Growth Drivers:

Global expansion of medical education and an increase in the number of medical schools and nursing training centers.

Increasing ethical restrictions on anatomical experiments ? a strengthening trend toward teaching model substitution.

3D printing and digital twin technologies are driving the personalized model market. The construction of medical infrastructure in emerging markets (Southeast Asia and Africa) drives demand.
