The global Public Key Infrastructure Software market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Public Key Infrastructure (PKI) is a security infrastructure that manages digital certificates and public keys. It provides a standardized set of processes and protocols for verifying the authenticity and integrity of digital certificates. A PKI system typically consists of components such as a Certificate Authority (CA), Certificate Revocation List (CRL), and directory services.

The PKI software market is experiencing steady growth, driven primarily by the expansion of e-commerce, cloud computing, and the Internet of Things. Upstream, the demand for certificate authorities and hardware suppliers is increasing; downstream, businesses' need for security solutions continues to expand. In terms of product specifications, support for quantum-resistant algorithms and cloud-native deployment are becoming trends. The future market size is expected to continue growing, especially in emerging technology areas.
