According to this study, the global Public Safety LTE Networks market size will reach US\$ 39300 million by 2031.

Public safety organizations are largely using Land Mobile Radio (LMR) systems for mobile communications. While LMR is a proven mission-critical instant voice solution, it has the shortcomings of limited coverage, very low data capacity, inadequate interoperability, and very high operational costs. It is because of the aforementioned reasons and several others that LMR is being replaced by next generation systems such as those enabled via the Long Term Evolution (LTE) cellular communications standard. Deployment of a public safety LTE networks for will offer much more than voice and basic data communication applications. There is a growing demand for non-voice oriented services, which will be facilitated via LTE, 5G, and beyond.

United States market for Public Safety LTE Networks is estimated to increase from US\$ million in 2024 to US\$ million by 2031, at a CAGR of % from 2025 through 2031.
