Public safety organizations are largely using Land Mobile Radio (LMR) systems for mobile communications. While LMR is a proven mission-critical instant voice solution, it has the shortcomings of limited coverage, very low data capacity, inadequate interoperability, and very high operational costs. It is because of the aforementioned reasons and several others that LMR is being replaced by next generation systems such as those enabled via the Long Term Evolution (LTE) cellular communications standard. Deployment of a public safety LTE networks for will offer much more than voice and basic data communication applications. There is a growing demand for non-voice oriented services, which will be facilitated via LTE, 5G, and beyond.
