The global Public Transportation Surveillance System market size is predicted to grow from US$ 28810 million in 2025 to US$ 47290 million in 2031; it is expected to grow at a CAGR of 8.6% from 2025 to 2031.

A public transport surveillance system typically comprises cameras installed inside buses, trains, subways, trolleys, ferries, etc., along routes that provide video footage useful for monitoring passenger safety and ensuring smooth operations. Modern public transportation systems rely heavily upon intelligent security solutions enabled through artificial intelligence (AI), edge computing, and Internet of Things (IoT). Real-time monitoring capabilities supported by robust data storage and retrieval help operators maintain vigilant watch over vehicle fleets en route and off-route areas without human intervention. Such advanced surveillance systems enable detection of incidents ranging from minor disturbances among passengers to extreme events like illegal activities like pickpocketing, vandalism, harassment, or terrorist threats. Analyzing data obtained via public transportation surveillance systems is crucial for improving operator response times to dangerous situations, promoting safer journeys and reducing crime rates across cities served by public transportation networks.

The growth of the public transportation surveillance system market is driven by a number of factors, including:

The increasing demand for public transportation security: Public transportation systems are increasingly becoming targets for crime, and this is driving the demand for public transportation surveillance systems.

The rise of terrorism: Terrorism is a major threat to public transportation systems, and this is driving the demand for public transportation surveillance systems.

The increasing use of smart cards: Smart cards are increasingly being used to pay for public transportation, and this is driving the demand for public transportation surveillance systems. Smart cards can be used to track the movements of passengers, and this information can be used to improve security.

The development of new technologies: New technologies, such as artificial intelligence (AI) and facial recognition, are being developed for public transportation surveillance systems. These technologies can be used to improve the effectiveness of public transportation surveillance systems.
